European Technical Assessment

**ETA 12/0205
of 26/11/2025**

(English language translation, the original version in Czech language)

Technical Assessment Body issuing the ETA: Technical and Test Institute
for Construction Prague

Trade name of the construction product

Sympafix Injection system M50-Plus

**Product family to which the
construction product belongs**

Product area code: 33
Bonded injection type anchor for use in
uncracked concrete

Manufacturer

Sympafix B.V.
Fluorietweg 25E
1812 RR Alkmaar
Netherlands

Manufacturing plant(s)

Sympafix Plant 2

**This European Technical Assessment
contains**

18 pages including 15 Annexes which form
an integral part of this assessment.

**This European Technical Assessment is
issued in accordance with regulation
(EU) No 305/2011, on the basis of**

EAD 330499-02-0601

This version replaces

ETA 12/0205 issued on 22/03/2017

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body - Technical and Test Institute for Construction Prague. Any partial reproduction has to be identified as such.

1. Technical description of the product

The Sympafix Injection system M50-Plus for uncracked concrete is a bonded anchor consisting of a cartridge with injection mortar and a steel element. The steel elements consists of a commercial threaded rods, a hexagon nut and a washer. The steel elements are made of galvanized steel or stainless steel.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The illustration and the description of the product are given in Annex A.

2. Specification of the intended use in accordance with the applicable EAD

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	Annex C 1, C 2, C 3
Characteristic resistance to shear load (static and quasi-static loading)	Annex C 1, C 4
Displacements under short term and long term loading	Annex C 5
Durability	Annex B 1
Characteristic resistance and displacements for seismic performance categories C1 and C2	NPA

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Satisfy the requirements for performance class A1
Resistance to fire	NPA

3.3 Hygiene, health and environment (BWR 3)

No performance determined.

3.4 General aspects relating to fitness for use

Durability and serviceability are only ensured if the specifications of intended use according to Annex B 1 are kept.

4. Assessment and verification of constancy of performance (AVCP) system applied with reference to its legal base

According to the Decision 96/582/EC of the European Commission¹ the system of assessment verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table applies.

¹ Official Journal of the European Communities L 254 of 08.10.1996

Product	Intended use	Level or class	System
Metal anchors for use in concrete	For fixing and/or supporting to concrete, structural elements (which contributes to the stability of the construction works) or heavy units	-	1

5. Technical details necessary for the implementation of the AVCP system, as provided in the applicable EAD

The factory production control shall be in accordance with the control plan which is a part of the technical documentation of this European Technical Assessment. The control plan is laid down in the context of the factory production control system operated by the manufacturer and deposited at Technický a zkušební ústav stavební Praha, s.p.² The results of factory production control shall be recorded and evaluated in accordance with the provisions of the control plan.

Issued in Prague on 26.11.2025

By

Ing. Jiří Studnička, Ph.D.
Head of the Technical Assessment Body

² The control plan is a confidential part of the documentation of the European Technical Assessment, but not published together with the ETA and only handed over to the approved body involved in the procedure of AVCP.

Specifications of intended use

Fasteners subject to (Static and quasi-static loads):

	Working life 50 years		Working life 100 years	
Base material	uncracked concrete	cracked concrete	uncracked concrete	cracked concrete
HD: Hammer drilling CD: Compressed air drilling	M8 to M24	No performance assessed	No performance assessed	No performance assessed
Temperature Range:	I: -40°C to +40°C ¹⁾ II: -40°C to +80°C ²⁾		I: -40°C to +40°C ¹⁾ II: -40°C to +80°C ²⁾	

¹⁾ (max. long-term temperature +24°C and max. short-term temperature +40°C)

²⁾ (max. long-term temperature +50°C and max. short-term temperature +80°C)

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013 + A2:2021.
- Strength classes C20/25 to C50/60 according to EN 206:2013 + A2:2021

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (all materials).
- For all other conditions according to EN 1993-1-4:2006+A2:2020 corresponding to corrosion resistance class:
 - Stainless steel A2 according to Annex A 4, Table A1: CRC II
 - Stainless steel A4 according to Annex A 4, Table A1: CRC III
 - High corrosion resistance steel HCR according to Annex A 4, Table A1: CRC V

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.).
- Fasteners are designed under the responsibility of an engineer experienced in fasteners and concrete work.
- The fasteners are designed in accordance to EN 1992-4:2018

Installation:

- Dry, wet concrete or flooded bore holes (not sea-water).
- Hole drilling by hammer drill (HD) or compressed air drill mode (CD).
- Overhead installation allowed.
- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Installation instructions

Drilling of the bore hole

1. Hammer drilling (HD) / Compressed air drilling (CD)

Drill a hole to the required embedment depth.
Drill bit diameter according to Table B1.
Aborted drill holes shall be filled with mortar.
Proceed with Step 2 (MAC or CAC).

Manual Air Cleaning (MAC)

Dry/wet: for all drill hole diameter and drill hole depth $h_0 \leq 10d_{nom}$ (for M8 to M16) or $h_0 \leq 8d_{nom}$ (for M20 + M24)

Flooded holes: for drill hole diameter $d_0 \leq 20$ mm and drill hole depth $h_0 \leq 10d_{nom}$

Attention! Remove standing water in the borehole before cleaning.
2a. Blow the bore hole clean minimum 4x from the bottom or back by hand pump (Annex B 2).

2b. Attach brush BRSDS according to Table B2 to a drilling machine or a cordless screwdriver. Brush the bore hole minimum 4x over the entire embedment depth in a twisting motion (if necessary, use a BRSDS EXTENSION).

2c. Finally blow the bore hole clean minimum 4x from the bottom or back by hand pump (Annex B 2).

Compressed Air Cleaning (CAC):

All diameter with drilling method HD/CD

Attention! Standing water in the bore hole must be removed before cleaning.

2a. Blow the bore hole clean minimum 4x with compressed air (min. 6 bar) (Annex B 2) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

2b. Attach brush BRSDS according to Table B3 to a drilling machine or a cordless screwdriver. Brush the bore hole minimum 4x over the entire embedment depth in a twisting motion. (If necessary, a BRSDS EXTENSION shall be used.)

Sympafix Injection system M50-Plus for concrete

Intended use
Installation instructions

Annex B 4

Installation instructions (continuation)

- 2c. Finally blow the bore hole clean minimum 4x with compressed air (min. 6 bar) (Annex B 2) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

Cleaned bore hole has to be protected against re-contamination in an appropriate way.

If necessary, repeat cleaning process directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.

3. Screw on static-mixing nozzle NOZZLE-BLACK-14 and load the cartridge into an appropriate dispensing tool.
If necessary, cut off the foil tube clip before use.
For every working interruption longer than the maximum working time t_{work} (Annex B 3) as well as for new cartridges, a new static-mixer shall be used.

4. Mark embedment depth on the anchor rod.
The anchor rod shall be free of dirt, grease, oil or other foreign material.

5. Not proper mixed mortar is not sufficient for fastening.
Dispense and discard mortar until a uniform grey colour is shown (at least 3 full strokes; for foil tube cartridges min. 6 strokes).

6. Starting at bottom of the hole and fill the hole up to approximately 2/3 with adhesive (If necessary, a mixer nozzle extension shall be used.)
Slowly withdraw of the static mixing nozzle avoid creating air pockets
Observe the temperature related working time t_{work} (Annex B 3).

7. Insert the anchor rod while turning slightly up to the embedment mark.

**Sympafix Injection system M50-Plus
for concrete**

Intended use
Installation instructions (continuation)

Annex B 5

Installation instructions (continuation)

8. Annular gap between anchor rod and base material must be completely filled with mortar. In case of push through installation the annular gap in the fixture must be filled with mortar also. Otherwise, the installation must be repeated starting from step 6 before the maximum working time t_{work} has expired.

9. Temperature related curing time t_{cure} (Annex B 3) must be observed. Do not move or load the fastener during curing time.

10. Install the fixture by using a calibrated torque wrench. Observe maximum installation torque (Table B1).

Flooded bore hole					1,2					

Table C4: Characteristic values of shear loads under static and quasi-static action								
Anchor size threaded rod			M8	M10	M12	M16	M20	M24
Steel failure without lever arm								
Characteristic shear resistance Steel, strength class 4.6 and 4.8	$V^0_{Rk,s}$	[kN]	0,6 • A _s • f _{uk} (or see Table C1)					
Characteristic shear resistance Steel, strength class 5.6, 5.8 and 8.8 Stainless Steel A2, A4 and HCR, all classes	$V^0_{Rk,s}$	[kN]	0,5 • A _s • f _{uk} (or see Table C1)					
Partial factor	$\gamma_{Ms,V}$	[-]	See Table C1					
Ductility factor	k ₇	[-]	1,0					
Steel failure with lever arm								
Characteristic bending moment	$M^0_{Rk,s}$	[Nm]	1,2 • W _{el} • f _{uk} (or see Table C1)					
Elastic section modulus	W _{el}	[mm³]	31	62	109	277	541	935
Partial factor	$\gamma_{Ms,V}$	[-]	See Table C1					
Concrete pry-out failure								
Factor	k ₈	[-]	2,0					
Installation factor	γ_{inst}	[-]	1,0					
Concrete edge failure								
Effective length of fastener	l _f	[mm]	min(h _{ef} ; 12 • d _{nom})					
Outside diameter of fastener	d _{nom}	[mm]	8	10	12	16	20	24
Installation factor	γ_{inst}	[-]	1,0					

Table C5: Displacement under tension load ¹⁾								
Anchor size threaded rod			M8	M10	M12	M16	M20	M24
Uncracked concrete C20/25 under static and quasi-static action								
Temperature range I: 40°C/24°C	δ _{N0} -factor	[mm/(N/mm²)]	0,03	0,04	0,05	0,07	0,08	0,10
	δ _{N∞} -factor	[mm/(N/mm²)]	0,07	0,08	0,08	0,08	0,08	0,10
Temperature range II: 80°C/50°C	δ _{N0} -factor	[mm/(N/mm²)]	0,02	0,03	0,03	0,04	0,04	0,05
	δ _{N∞} -factor	[mm/(N/mm²)]	0,15	0,17	0,17	0,17	0,17	0,17
1) Calculation of the displacement δ _{N0} = δ _{N0} -factor · τ; τ: action bond stress for tension δ _{N∞} = δ _{N∞} -factor · τ;								
Table C6: Displacement under shear load ¹⁾								
Anchor size threaded rod			M8	M10	M12	M16	M20	M24
For uncracked concrete C20/25								
All temperature ranges	δ _{V0} -factor	[mm/kN]	0,02	0,02	0,01	0,01	0,01	0,01
	δ _{V∞} -factor	[mm/kN]	0,03	0,02	0,02	0,01	0,01	0,01
1) Calculation of the displacement δ _{V0} = δ _{V0} -factor · V; V: action shear load δ _{V∞} = δ _{V∞} -factor · V;								
Sympafix Injection system M50-Plus for concrete							Annex C 5	
Performances Displacements under static and quasi-static action
